Fuels and safety information

In our fire shows we use Fire-Juggling-Equipment, such as fans, staffs, pois, clubs and similar props. These are provided with Kevlar wicks, are soaked in purified firetoy-fluid before being used, ejected professionally and ignited. During the show, there is no flammable liquid in the entrance area, except on our equipment and the for that purpose designed fire bowls. The deletion of our devices is done with wet fire blankets and for safety we have a foam fire extinguisher. In addition, the organizer must provide a security guard with a foam extinguisher close to the stage and ensure that there are no persons and easily flammable or endangered objects in or above the entrance area. Fire police regulations and permits must be obtained and clarified by the organizer.

We play on all refractory, flat ground conditions and stages! If necessary, the area must be marked clearly visible with a barrier.

Our equipment is constantly maintained and tested before the performances.

Used fuel

- Highly purified firetoy-fluid (Toy-Fluid Nr. 56) with a flash point of approx. 56° C
- The liquid burns only on the carrier material (kevlar wick).
- Fire bowls: carrier material Rockwool, soaked with lamp oil - serve to ignite the fire equipment and as needed as a limitation

Effects:

- Lycopodium-staff: fine powder for fire effects
- Pyrotecnic of the class T1 with 2, 3 or 5m fountains (if agreed for the show)
- FP2 DMX flame projectors with Aerosol filling (if agreed for the show)

Technical Requirements

- Stage: min. 8m x 6m / ideal 15m x 10m
- Safety distance: depending on the police regulations, but at least 2m
- We have a battery powered system: Road Buddy 10; RMS power: 120W; Peak power: 480W.
If we're to use the music system at the event, we need one mini jack connection to connect an MP3 player with playlist.
- Foam fire extinguishers
- Fire police regulations and permits
